PROFESSIONAL SUMMARY

Java Software Developer with 1.5+ years of experience developing backend and full-stack applications using Java, Spring Boot, Spring Security, REST APIs, JPA/Hibernate, MySQL, and React.js. Experienced in building secure REST APIs, JWT-based authentication and role-based authorization, business workflows, centralized exception handling, and Redis caching, with familiarity in microservices architecture. Hands-on experience with JUnit, Mockito, Swagger/OpenAPI, Git, and Agile development, with a strong focus on building maintainable and scalable software.

PROFESSIONAL EXPERIENCE

Junior Software Engineer | Esquare Software India Pvt Ltd | Bengaluru, India (Jan 2025 – Present)

Project: Dubai-Based Healthcare Management Platform

Contributed to the development and enhancement of a Dubai-based healthcare management platform supporting appointment scheduling, patient records, document management, doctor management, notifications, and patient-doctor interactions.

Developed and maintained backend services using Java and Spring Boot, implementing REST APIs, JWT-based authentication, role-based authorization, business workflows, centralized exception handling, and Redis caching to support secure, scalable, and performant healthcare operations.

Key Responsibilities:

- Developed REST APIs spanning 6 core platform modules — authentication & role management, appointments, patient records, documents, doctor management, and notifications.
- Developed REST endpoints with centralized exception handling, standardizing error responses across the application and reducing debugging time for the team.
- Implemented JWT-based authentication and role-based authorization using Spring Security to manage access for doctors, patients, and admins.
- Implemented Redis caching to optimize frequently accessed healthcare data and improve API response time and application performance.
- Built React registration and onboarding pages with dynamic, conditional field rendering driven by admin-configured selections, reducing hardcoded form logic.
- Diagnosed and resolved CSS/UI issues across frontend pages to improve layout consistency and cross-page usability.
- Implemented status-based workflow logic for appointments and documents using service-layer business rules.
- Used Swagger/OpenAPI for API documentation and testing, improving cross-team collaboration with frontend and QA.
- Ensured high code quality through peer code reviews, adherence to clean code principles, and comprehensive unit and integration testing using JUnit and Mockito.
- Managed version control using Git and participated in Agile development processes using Jira.

Technologies: Java, Spring Boot, Spring Security, JWT, REST APIs, Redis, Swagger/OpenAPI, HTML, CSS, JavaScript, React, JUnit, Mockito, MySQL, Tomcat, Git, GitHub, Jira, and Confluence.

EDUCATION

- Netaji Subhash Engineering College (2018 – 2022) - B.Tech in Computer Science & Engineering
CGPA: 9.23/10

CERTIFICATIONS & TRAINING

- Java Full Stack Training - JSpider
- Soft Skills – NPTEL
- Ethics in Engineering Practice - NPTEL
- Joy of Computing using Python - NPTEL

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript
- **Backend Technologies:** Spring Framework, Spring MVC, Spring Boot, Spring Data JPA, Spring Security, Hibernate, Servlet, JSP, REST APIs
- **Frontend Technologies:** HTML, CSS, React
- **Databases:** MySQL, Oracle DB, PostgreSQL
- **Messaging & Caching:** Redis, Apache Kafka
- **Testing:** JUnit, Mockito
- **Development Tools:** Eclipse, IntelliJ IDEA, VS Code, Tomcat, Maven, Gradle, Docker, Postman
- **Version Control & Collaboration:** Git, GitHub, GitLab, Jira
- **Concepts:** OOP, Data Structures & Algorithms, Exception Handling, Layered Architecture, Microservices Architecture, API Design, MVC Pattern

PROJECTS

- **Sahayak – Google AI Hackathon Project | AI-Powered Educational Assistant:**
AI-powered educational platform designed to support teachers in rural India by generating personalized lesson plans, worksheets, AI-based evaluations and visual aids. Utilized LLMs (via Gemini API), NLP, and generative AI to automate content creation and assessment. Integrated with Firebase, Firestore, and Vertex AI to enable scalable backend support, multilingual support, and real-time feedback — addressing multi-grade, multi-level classroom challenges.
Tech Stack: Node.js, TypeScript, React, Express.js, Firebase, Firestore, and Gemini API.
- **HRMS Portal:**
Implemented modules for employee onboarding, attendance tracking, leave management, and role-based access control. Built using Java, Spring Boot, Spring Data JPA, MySQL, HTML/CSS, JavaScript and React following MVC architecture. Ensured secure authentication and CRUD operations for HR and employee users. Designed user-friendly interfaces and optimized database schema for efficient and scalable data management.
Tech Stack: Java, Spring Boot, Spring Data JPA, MySQL, HTML/CSS, JavaScript, and React.
- **Bus Reservation Application:**
Developed features for seat booking and cancellation, user/admin authentication, and schedule management with robust database operations. Built RESTful APIs using Spring Boot for booking, cancellation, and schedule retrieval and integrated them with the frontend. Implemented JWT-based authentication and authorization for secure user and admin access. Used Hibernate ORM for object-relational mapping and efficient transaction management. Implemented validation and transaction handling to ensure data consistency across client and server operations.
Tech Stack: Java, Spring Boot, MySQL, Hibernate, and React.

- **E-commerce Resell Portal (SEBEX):**

Designed and developed a responsive e-commerce marketplace enabling users to list, browse, and purchase products. Developed the frontend using React.js and backend services using Node.js and Express.js, exposing RESTful APIs for product listings, user management, and transaction workflows. Utilized MongoDB for flexible data management and implemented secure JWT authentication. Optimized application performance through efficient database queries and asynchronous request handling.

Tech Stack: React, Node.js, Express.js, and MongoDB.

- **Locator AI – Intelligent Location Discovery Platform:**

Developed RESTful backend services using Java 17 and Spring Boot 3 to enable users to discover nearby hospitals, restaurants, ATMs, and other places based on location and search radius. Integrated Google Places API to retrieve real-time location data, implemented dynamic filtering and sorting based on distance, ratings, and place categories, secured APIs using Spring Security with JWT authentication, and designed modular services following a layered architecture to build a scalable and maintainable backend application.

Tech Stack: Java 17, Spring Boot 3, Spring Security, PostgreSQL, JWT, Maven, REST APIs, Google Places API, JSON, Lombok, MapStruct, and Git.
